Security+

Education

B.A., Economics, University of Notre Dame

Mr. McManus has more than 10 years of cybersecurity, consulting, and program management experience, maturing security programs at organizations with national and global footprints, building and conducting security assessments, and leading incident response and investigation teams. Mr. McManus has broad experience across multiple industries, with a focus in healthcare delivery and healthcare technology.

At FTI Consulting, Mr. McManus leads teams to perform cybersecurity maturity assessments, implement strategic roadmaps, conduct regulatory compliance assessments, build internal audit and compliance programs, and carry out incident response and complex investigative activities. Mr. McManus' client delivery highlights include leading regulatory compliance assessments for multiple global technology firms, providing response and investigative services during an active incident; coordinating and advising multiple technical workstreams during a complex investigation of sophisticated mobile malware; and conducting strategic roadmap development and implementation services. Mr. McManus has worked with clients in healthcare, retail, data services, financial services, and within the defense industrial base and has experience with controls frameworks from CIS, NIST, and ISO, amongst others, along with experiential knowledge of regulatory requirements, including HIPAA, DFARS, and GDPR, amongst others. In multiple investigations, Mr. McManus has prepared investigative findings for delivery to law enforcement.

Prior to FTI Consulting, Mr. McManus served as a Senior Program Manager on the information security team at WeWork and as a project manager for Planned Parenthood's national information security program.

Mr. McManus has previous consulting experience as an implementation and security lead for Epic, the electronic medical record vendor, where he delivered large-scale projects and security best practices to over a dozen nationally recognized healthcare organizations and incorporated EMR security into hospital information security programs.
