How should organizations think about transforming their cybersecurity to improve resiliency?

Todd Renner

**Senior Managing Director
Atlanta**

“Collaboration amongst business units and integration of key stakeholders are fundamental aspects of improving resiliency for organizations which continue to face a complex cybersecurity threat landscape. While a cyber attack or data incident provides an opportunity to transform a cybersecurity program, proactive transformation can substantially mitigate risks posed by digital threats before an attack occurs.”

Todd Renner

**Senior Managing Director
Atlanta**

“‘Tone from the top’ security culture, focused on protecting customers, their data, and the brand will assist an organization with successful recovery from increasingly sophisticated threats.”

Frank Damm

**Managing Director
Düsseldorf**

“Organizations need to balance their cybersecurity resilience with evolving business needs, evolving technology and interconnectivity, plus evolving adversarial skills. If the update to resiliency covers several cybersecurity disciplines and several technology areas it is a transformation.”

Frank Damm

**Managing Director
Düsseldorf**

“It is useful to involve external views and experts to get the client’s board commitment for a cybersecurity transformation. Our experts can do the planning of the cost and duration of the transformation in collaboration with the client’s internal experts.”
